SankhyaVox

Speaker Recording Guide

Thank you for contributing to this Sanskrit speech research project! You do **not** need any Sanskrit background. Just follow these steps carefully.

1 What You Will Record

You will record **13 Sanskrit words**, each spoken **10 times** in a single recording file. Later, you will also record **35 two-word combinations** (10 times each).

Summary

Session	Recordings	Estimated Time
Isolated words (13 words × 1 file each)	13 files	∼5 min
Two-digit combos (35 combos × 1 file each)	35 files	∼15 min

2 Environment Setup

1. Go to the **quietest room** available.
2. **Close the door.** Switch off fan/AC if possible.
3. **Early morning or late night** is best (lowest ambient noise).
4. Keep pets and other people out during recording.

3 Phone / Mic Setup

1. Use your **default voice recorder app** (or Audacity on PC).
2. Hold the phone **15–25 cm** from your mouth, mic facing you.
3. **Do not cover** the microphone with your hand.
4. A wired earphone mic is preferred (more consistent distance), but not required.
5. Save recordings as `.wav` if possible; `.mp3` is acceptable.

4 How to Record One Word

Step-by-Step

1. Press **Record**.
2. **Wait 1 second** (silence).
3. Say the word **clearly** at natural volume.

4. **Wait 1 second** (silence).
5. Repeat steps 3–4 for a total of **10 times**.
6. Press **Stop**.

Rhythm:

$$\underbrace{(silence)}_{1s}\ \underbrace{word}_{\sim 0.7s}\ \underbrace{(silence)}_{1s}\ \underbrace{word}_{\sim 0.7s}\ \cdots \times 10 \quad \Rightarrow \quad \sim 17stotal$$

Tip: Before each repetition, silently count the syllables of the word, then speak it — this prevents syllable-dropping mid-session.

During recording, do NOT:

- Cough, laugh, or say "umm" in the silent gaps.
- Whisper or shout — use your **normal speaking voice**.
- Move the phone closer/further mid-recording.

5 File Naming

Save each recording as:

`<YourID>_<wordname>_raw.wav`

Examples:

- `S04_eka_raw.wav`
- `S04_pancha_raw.wav`
- `S04_dasha_eka_raw.wav` (for the combo "dasha eka" = 11)

Your Speaker ID will be assigned to you (e.g. `S01`, `S02`, ...).

6 Word List — Isolated Words

Record each of these **13 words** as a separate file (10 repetitions each):

Critical: Do NOT use Hindi equivalents. Say the full Sanskrit word. Count the syllables before speaking:

- **dvi** = 1 syllable (DWEE) — NOT "dva", NOT "do"
- **catur** = 2 syllables (cha-TUR) — NOT "char", NOT "chaar"
- **pañca** = 2 syllables (PUN-cha) — NOT "panch"
- **daśa** = 2 syllables (da-SHA) — NOT "das"
- **viṃśati** = 3 syllables (vim-SHA-ti) — NOT "bees"
- **aṣṭa** = 2 syllables (USH-ta) — NOT "aath"

If you are unsure, listen to the reference audio before recording.

#	Word	Value	Pronunciation	Say this	NOT this
1	śūnya	0	SHOON-ya	`S___shunya_raw.wav`	—
2	eka	1	AY-ka	`S___eka_raw.wav`	—
3	dvi	2	**DWEE** (1 syl.)	`S___dvi_raw.wav`	"dva", "do"
4	tri	3	TREE (1 syl.)	`S___tri_raw.wav`	—
5	catur	4	**cha-TUR** (2 syl.)	`S___catur_raw.wav`	"char", "chaar"
6	pañca	5	**PUN-cha** (2 syl.)	`S___pancha_raw.wav`	"panch"
7	ṣaṭ	6	**SHUT** (1 syl.)	`S___shat_raw.wav`	"chhe", "saat"
8	sapta	7	SUP-ta (2 syl.)	`S___sapta_raw.wav`	—
9	aṣṭa	8	**USH-ta** (2 syl.)	`S___ashta_raw.wav`	"aath", "attha"
10	nava	9	NUH-va (2 syl.)	`S___nava_raw.wav`	—
11	daśa	10	**da-SHA** (2 syl.)	`S___dasha_raw.wav`	"das", "duss"
12	viṃśati	20	**vim-SHA-ti** (3!)	`S___vimsati_raw.wav`	"bees", "vimsht"
13	śata	100	SHA-ta (2 syl.)	`S___shata_raw.wav`	—

Pronunciation Note

Small pronunciation differences are perfectly fine. What matters most is that you are **consistent with yourself** across all 10 repetitions. Say it the same way every time.

7 Two-Digit Combinations

After finishing the 13 isolated words, record these **35 combinations**. Each combination is spoken as separate words with a small pause between them.

Spoken form	=	File suffix	Spoken form	=	File suffix
dasha eka	11	`dasha_eka`	pancha dasha sapta	57	`pancha_dasha_sapta`
dasha pancha	15	`dasha_pancha`	shat dasha	60	`shat_dasha`
dasha nava	19	`dasha_nava`	shat dasha tri	63	`shat_dasha_tri`
vimsati	20	`vimsati`	sapta dasha	70	`sapta_dasha`
vimsati eka	21	`vimsati_eka`	sapta dasha dvi	72	`sapta_dasha_dvi`
vimsati pancha	25	`vimsati_pancha`	ashta dasha	80	`ashta_dasha`
vimsati sapta	27	`vimsati_sapta`	ashta dasha pancha	85	`ashta_dasha_pancha`
vimsati nava	29	`vimsati_nava`	nava dasha	90	`nava_dasha`
tri dasha	30	`tri_dasha`	nava dasha eka	91	`nava_dasha_eka`
tri dasha catur	34	`tri_dasha_catur`	nava dasha pancha	95	`nava_dasha_pancha`
catur dasha	40	`catur_dasha`	nava dasha sapta	97	`nava_dasha_sapta`
catur dasha dvi	42	`catur_dasha_dvi`	nava dasha nava	99	`nava_dasha_nava`
catur dasha ashta	48	`catur_dasha_ashta`	shunya	0	`shunya`
pancha dasha	50	`pancha_dasha`	ashta	8	`ashta`
pancha dasha eka	51	`pancha_dasha_eka`	sapta	7	`sapta`
pancha dasha ashta	58	`pancha_dasha_ashta`	tri	3	`tri`
pancha dasha nava	59	`pancha_dasha_nava`			

File naming for combos: `S04_dasha_eka_raw.wav` (for "dasha eka" = 11)

8 Submitting Your Recordings

1. **Before you start:** Listen to the reference recordings sent by the project coordinator. Try to match the style, speed, and syllable count — not the exact accent.
2. Create a folder named with your Speaker ID (e.g. `S04`).
3. Place all your `_raw.wav` files inside it.
4. Share the folder via **WhatsApp** or **Google Drive link**.

Thank you for your contribution to Sanskrit speech research!
